

Community Informatics Initiative (CII) Research Series

Trajectory

Stephen Cartwright

For more than ten years artist Stephen Cartwright has recorded his exact latitude, longitude and elevation every

hour of every day. This data is embodied physically in his sculptural, mapping, modeling and kinetic works and illustrate unique responses to existing, modified and

fictional landscapes. As research and inspiration for his art practice, Cartwright has completed more than 20,000 miles of long-distance, self-supported bicycle travel in North America, Europe and Asia. Cartwright is an assistant professor in sculpture at the University of Illinois at Urbana-Champaign.

Wednesday, August 26, 2009, 2-3pm

Room 109, Library and Information Science (501 E. Daniel Street, Champaign)
